

# Ethernet

## STM32 Open IoT and IIoT Gateways (P10 - P12)

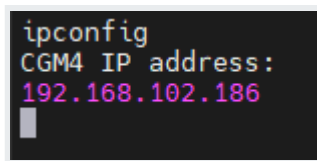

Link to repositories:

- [C](#)

This example allows you to check the Gateway's IP address. Connect the device via USB/UART converter and choose correct COM/ttyUSB port. Remember to connect the IoT Gateway to the network using an Ethernet cable. Type in terminal "ipconfig". If your network connection works

properly, IP address will be displayed as below:

A terminal window with a black background and white text. The text shows the output of the 'ipconfig' command for a device named 'CGM4'. The IP address '192.168.102.186' is highlighted in red. A white cursor is visible on the line following the IP address.

```
ipconfig
CGM4 IP address:
192.168.102.186
█
```
